

**AUDIO
& VIDEO
CONTENT
DISTRIBUTION
GLOBALLY**

WHAT WE DO

Neterra provides a portfolio of services for global distribution of video content. Audio and video signal broadcasting all over the world using satellite and terrestrial communication routes. Digital rights management, content protection and 24/7 support.

KEY SERVICES

- Content acquisition from satellite and terrestrial sources
- Advanced digital head-end processing (encoding/transcoding, Conditional Access System encryption, multiplexing etc.)
- Playout platform as a service including advertisement replacement/insertion and time-delay
- Direct-to-home (DTH) broadcast satellite TV platform as a service
- Over-the-top Internet Protocol TV (OTT/IPTV) platform as a service
- Content distribution and broadcasting via fiber, satellite, and public Internet

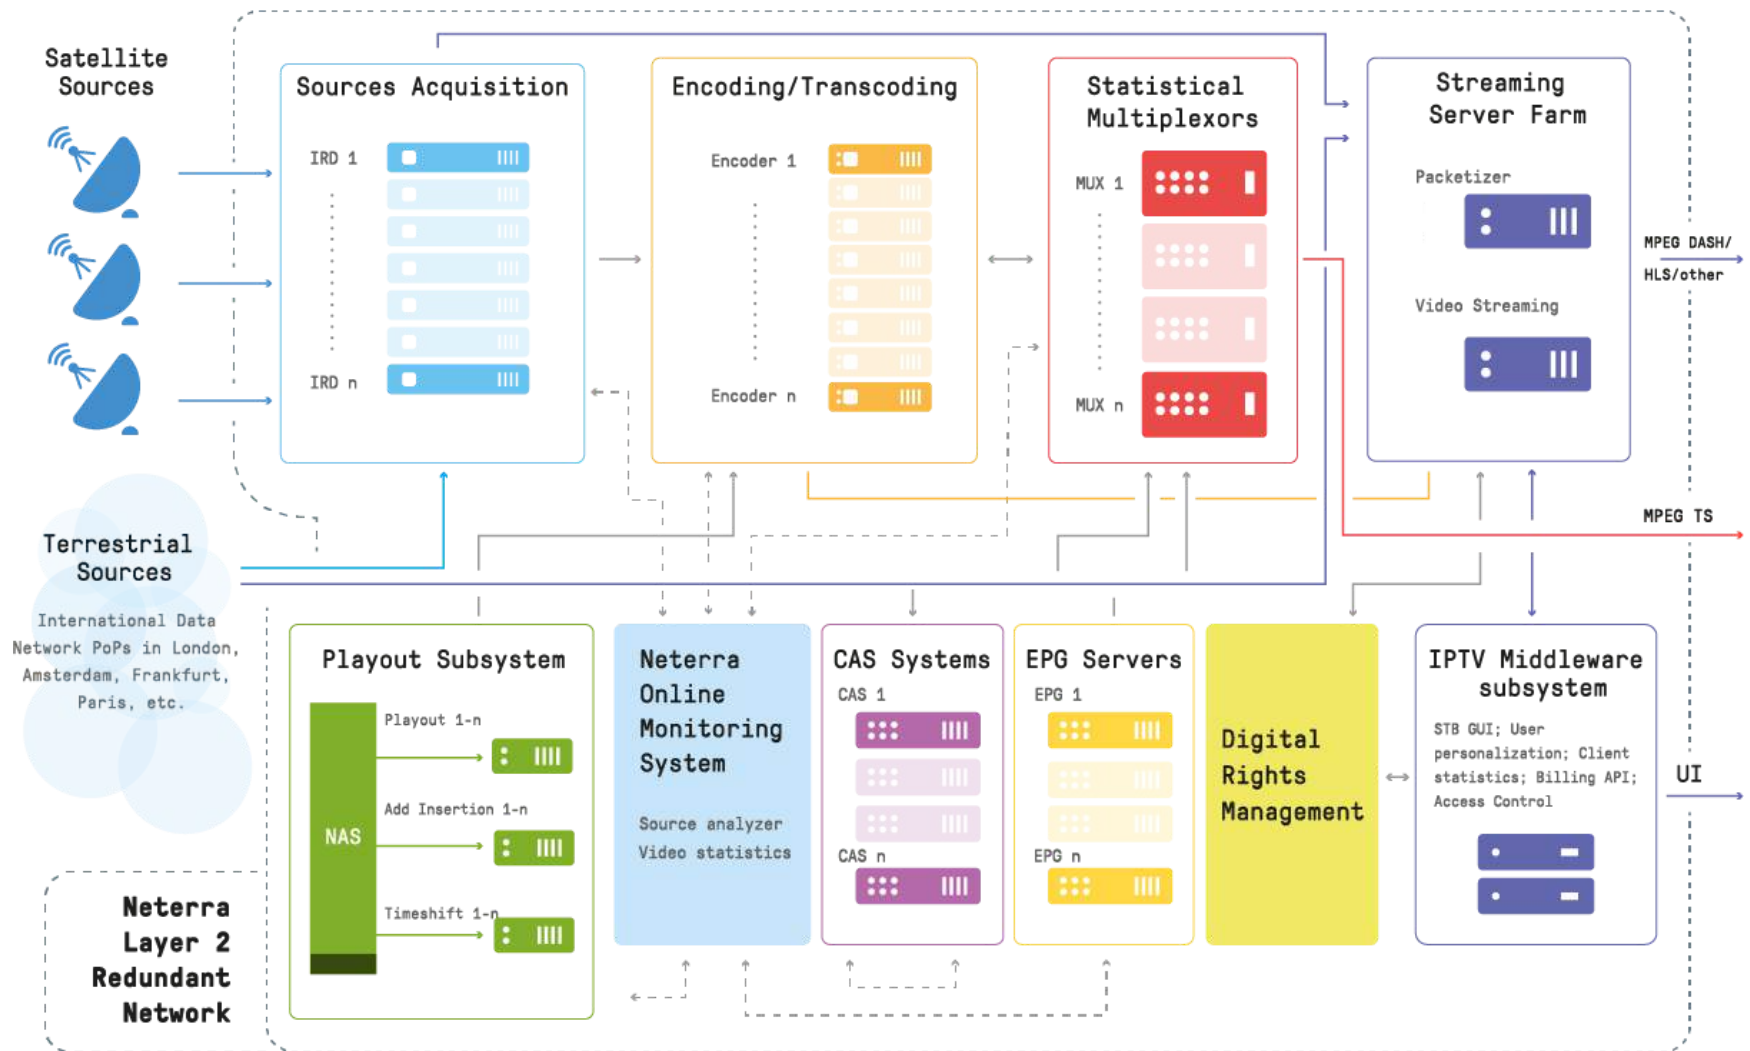

FEATURES & BENEFITS

- Proven technology that can be implemented anywhere “today”;
- Dedicated organization that responds with flexible options via satellite and fiber;
- Access to more than 2,500 TV channels from satellite and terrestrial sources;
- CAPEX and OPEX options by customer choice;
- Independent from suppliers of hardware, software and satellite operators;
- 24x7 NOC technical support - diagnostics in 9 minutes or less;
- Professional network design, global implementation, and maintenance.

Digital headend platform for advanced audio and video processing

The whole system or any part of it could be provided as One Stop Shop.

24/7 MONITORING & SUPPORT

Neterra has introduced the Finite State Diagnostics with one simple belief: Diagnostics should take seconds and minutes not hours and days! Finite State Diagnostics brings real science to the dark art of problem discovery and resolution.

- Three separate 24/7 centers staffed with engineers specialized in transmission services, audio/video and satellite services, IT services.
- Services are monitored through the Neterra Online Monitoring System (NOMS) and Customers have online access to it.
