

Protection Against DDoS Attacks

www.neterra.net

What is a DDoS Attack?

The DDoS (Distributed Denial of Service) attack is any malicious attempt to fully or partially impair the service or the access to your equipment.

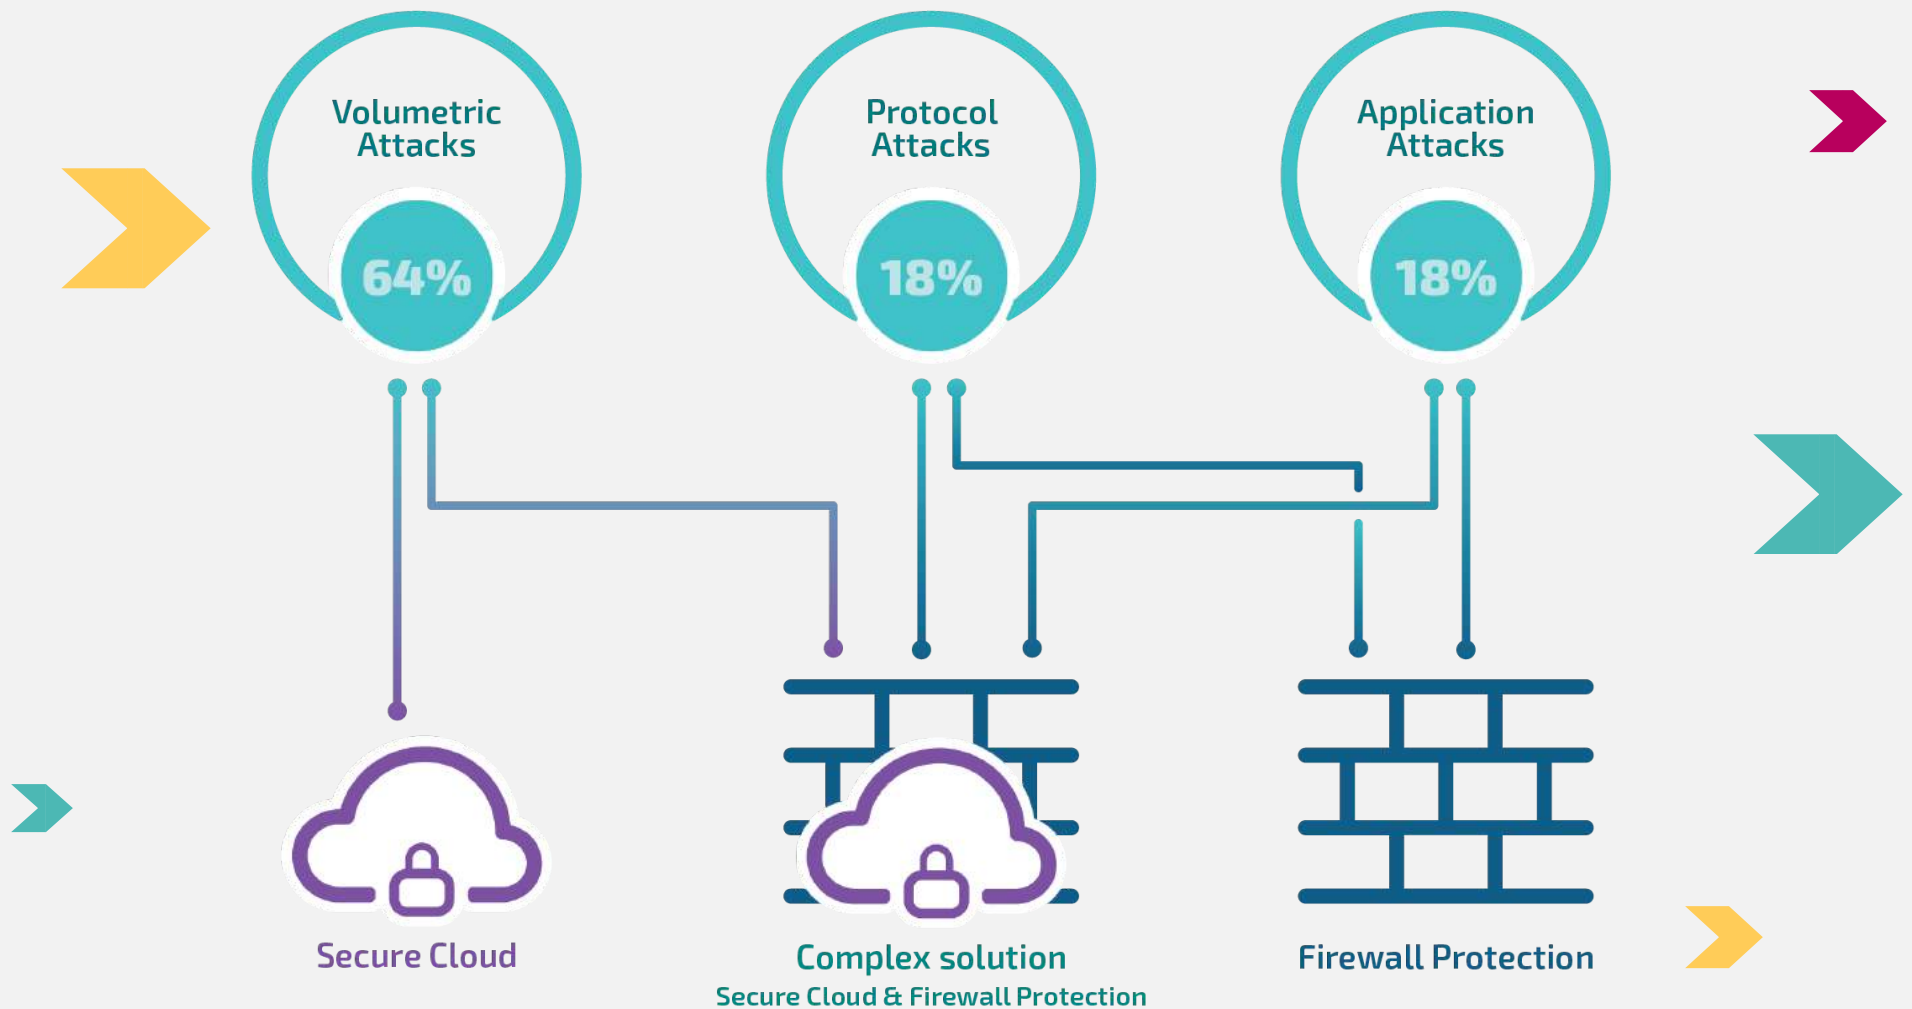

In more than 50% of the cases, DDoS attacks are being used to mask up someone's attempt to steal your company's data, financial or intellectual property.

How DDoS attacks affect your business?

- 
- Direct financial losses
 - Data theft
 - Harm to reputation
 - Loss of customer trust
 - Reduced sales
 - Time and money investment in dealing with harmful consequences
 - Drop in search engine rankings
- 

Attack Types

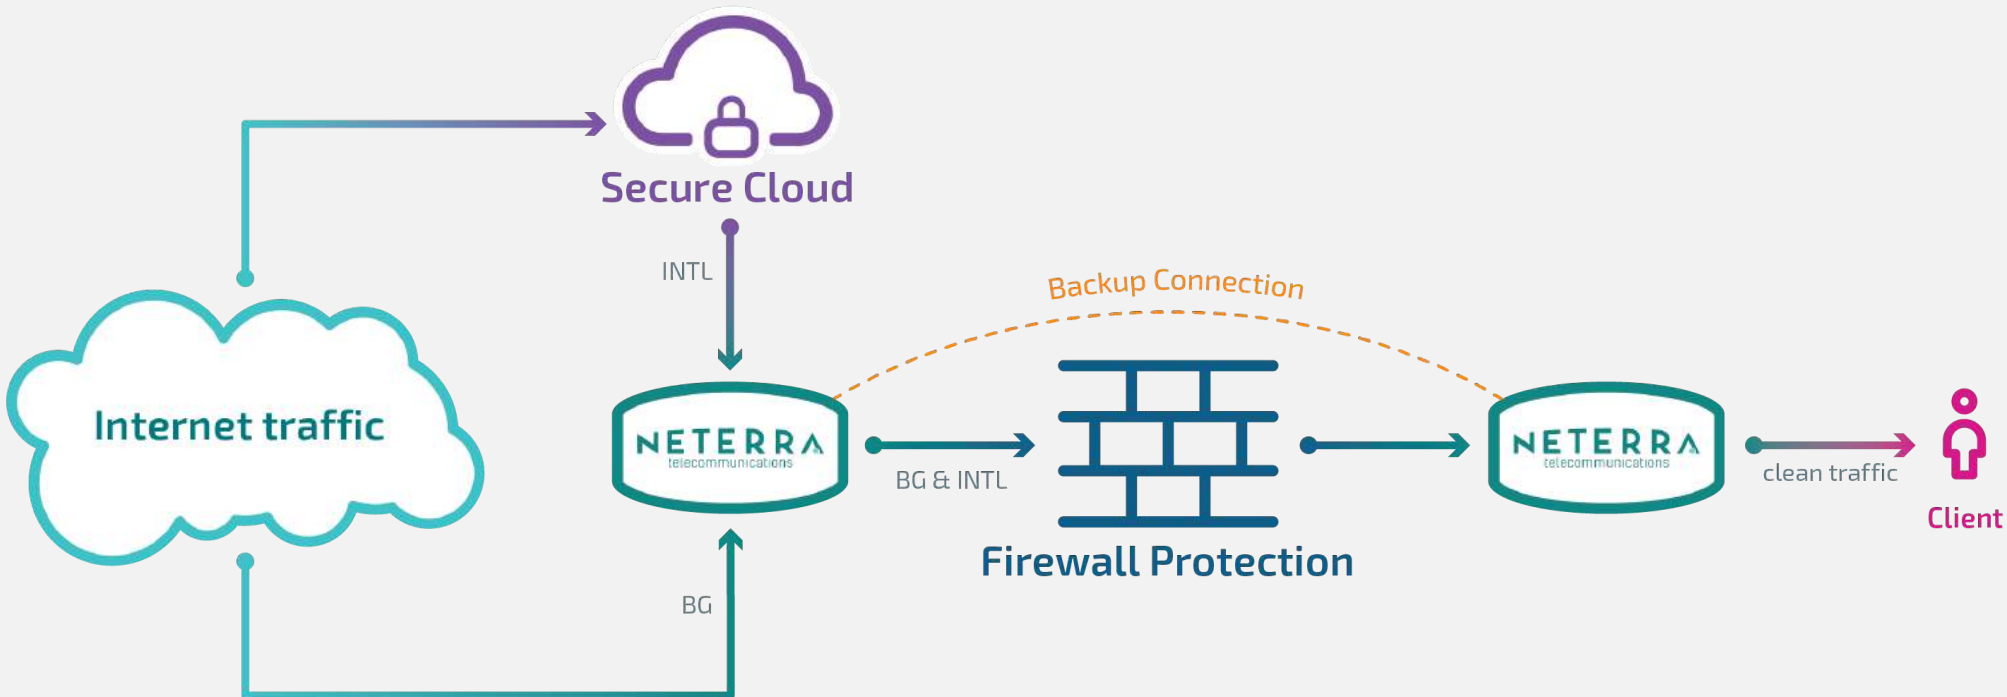

Neterra is your best choice

- 20+ years providing reliable and secure telecom services
- A full range of telecom services
- Immediate DDoS attacks filtration
- MyNeterra - Online portal for client's services
- Customer support and real-time monitoring

Combined Solution

Secure Cloud + Firewall Protection

Benefits

- Mitigates all types – close to the attack source and close to the target
- Stops big volumetric attacks (>1Tbps)
- No additional latency added
- Opportunity to combine with other services for protection
- Proven working solution
- 24/7 proactive expert support
- Neterra Online Monitoring System
- SMS & Email notification
- Detailed analysis/statistics and attacks history

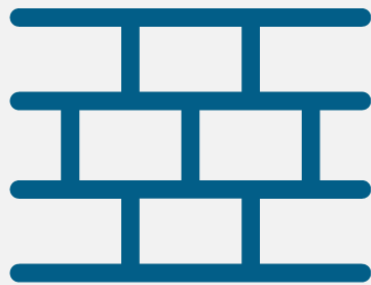

Other solutions
